MUNICIPAL AFFAIRS

Jarvis Building, 9925 - 107th Street, Edmonton, Alberta, Canada T5K 2H9

In the course of our operations the Branch frequently finds it necessary to undertake ad hoc surveys of property tax and service charge levels. Usually this is for a sample of municipalities relevant to a particular study. It has been our experience that these ad hoc surveys can be somewhat time-consuming and the information collected cannot generally be readily made available to all the municipalities surveyed. This comprehensive survey has been mounted to overcome these problems, with the Branch providing a data-collection and data-dissemination service.

An experimental survey was conducted in 1985. It was restricted to cities, towns and villages, and was very well received according to the results of an evaluation exercise. The 1986 Survey reported here is bigger - in the sense that it has been extended to include summer villages and rural municipalities. It has also been improved in terms of the addition of context data and efforts to rank, group and average the data for greater interpretative convenience. And it is being distributed several months earlier than the 1985 Survey Report.

To further enhance the value of the Survey, the Branch will be endeavouring to undertake the 1987 Survey in such a way that the results can be reported before the end of 1987. In this way the results should have immediate value to municipalities in their budgeting for 1988.

I am pleased to transmit these data tabulations. Virtually all the municipalities contacted chose to respond to the survey. The data presented is basically that reported by the municipalities. While there has been an increased level of vetting of survey responses, compared to last year, in the interest of speedy publication the information presented has not been subjected to a comprehensive and detailed validation. It should, therefore, be accepted at face value.

Your comments on the survey, and its usefulness are invited. May I also take this opportunity to thank all those municipal officials who completed the survey questionnaire. I trust this report will prove to be suitable compensation for their collective efforts.

John McGowan, Executive Director
Municipal Services Branch
Alberta Municipal Affairs

A USER'S GUIDE TO THE 1986 RESIDENTIAL PROPERTY SURVEY

1. Introduction

This report consists largely of numerical data on residential property assessment, taxation, utility rates and service charges. Providing this information enables comparisons to be made on these aspects of municipal operations for municipalities in Alberta.

No two municipalities are the same in terms of the mix of residential properties and servicing arrangements. Hence, assumptions are needed to make meaningful comparisons among the data and among municipalities. This user's guide brings attention to the factors causing variability in the data. It also indicates the confidence and meaningfulness with which certain comparisons can be made.

Section 2 and 3 of the user's guide describe the Survey, the response rates and property selection. Factors affecting taxation comparisons are detailed in section 4, while sections 5 and 6 refer, respectively, to the utility and market value data. As described in section 7, this report, although complete by itself, does not include all the data surveyed. Sections 8 to 11 highlight the four parts in the report containing the tabulated data. The summary statistics found in Part I are extensively discussed, given the degree to which comparisons could be made from these statistics and the inclusion of context data drawn from sources other than the survey. The last three sections (section 12, 13 and 14) of the user's guide furnish technical notes, including a list of abbreviations, a 1986 municipal population list and copies of the surveys which were mailed to the municipalities.

2. Survey Design and Response

The 1986 survey covers all Alberta municipalities. Three separate questionnaires, or record sheets, were developed for: i) urban municipalities (cities, towns and villages); ii) summer villages, and iii) rural municipalities (counties, municipal districts, improvement districts and the Special Areas).

The urbans record sheet incorporated improvements suggested by the experience with the initial 1985 Survey. An opinion evaluation of the 1985 experiment was included for this group. In general the opinions expressed were very positive with regard to the usefulness of the survey data. Specific uses mentioned frequently were: i) general policy formulation; ii)

determination of broad taxation strategies and basic approaches to utility charging; iii) setting rate schedules; and iv) guidance in the budgeting process.

The specific questionnaires for summer villages and rural municipalities represent the first experimental effort to survey these types of municipality. It is anticipated that the experience will also lead to improvements in these areas in future years.

The questionnaires were sent out in early December 1986, with a request for a response by mid-January, 1987. A reminder letter was sent out in early January. Telephone contact was made with a number of non-respondents to check on their interest in participating in the survey. The overall response was very high at 94%, with the following response rates for each municipal type: Cities 100% (16 out of 16); Towns 100% (108 out of 108); Villages 94% (115 out of 122); Summer Villages 78% (39 out of 50); Counties 100% (30 out of 30); Municipal Districts 100% (20 out of 20); Improvement Districts 71% (10 out of 14); and the Special Areas (reported as one unit).

Those municipalities which did not respond are indicated in the tables. These also include those who did not respond because the survey information being sought was not applicable to their situation.

The questionnaires (see pages 17-19) sought to elicit data mainly with reference to a <u>defined representative property</u>, based on what is generally referred to in assessment circles as 'a standard project (3C) bungalow.' This property may be described as follows:

> "The standard project home meets and occasionally exceeds minimum building requirements. The exterior usually has a typical style that is generally rectangular in shape. The floor plan is functional, finishes are normally limited to average quality pre-manufactured or standard materials, and a minimum number of decorative features may be encountered. The total finished floor area for this class generally ranges from 90 to 190 square metres."

For <u>urban</u> municipalities the sample residential property was further defined as a five-to-ten year-old 3C bungalow; approximately 110 sq. metres (1200 sq. feet); with a single garage (attached or detached), on a standard residential lot. This elaboration also applied to summer villages with the only exception being the reference to a standard <u>lake-front</u> lot. If this type of property was not present in a particular summer village, the survey directed that reference be made to a lake-front residence that was as similar as possible to the one described. Additionally, for summer villages, separate data were requested for a <u>permanently</u> occupied residence and a <u>seasonally</u> occupied residence (the latter being a residence occupied in total for less than six months in a year).

The basic property definition used for urbans also applied to rural municipalities, although data were requested for two types of property: a) a three-acre parcel, and b) a standard residential lot in either a designated hamlet or other unincorporated 'urban community' within the rural municipality.

In each case the questionnaire sought details on assessment, taxation, utility charges and market value of the defined property. A second part of each questionnaire dealt with utility rate structures and schedules, only a limited part of which is reported upon in the present publication (standard annual water consumption cost). There was a third part to the urban questionnaires, seeking the respondents' opinions on the 1985 Survey.

3. Property Selection

Selection of the particular residential property or properties was at the discretion of those completing the questionnaire. The data reported in each case will be broadly comparable to the extent that each sample property conforms to the specifications for the defined property. Some variability due to the selection factor is inevitable, but the intent of the sample property specification was to limit the influence of this factor to minor proportions. The assessment data reported in Part II incorporates some information which may assist in further gauging the significance of this factor (e.g. lot size, year of construction, year of assessment, etc.). It should be checked out first in any effort to explain/understand differences in taxation or utility charges between particular municipalities.

4. Taxation Data Comparability

Apart from the selection factor discussed above, comparability of taxation levels may also be influenced by any or all of the following:

i) the currency of the property assessment values, and/or
ii) the presence or absence of special assessments and local improvements, i.e. special municipal levies, and/or
iii) the incidence of extraordinary special requisitions, e.g. by a hospital district authority.

The direction given in the survey with respect to special municipal levies was that these should be included where such special taxation applied to a majority of the properties in the municipality in the same age-range as the sample property. Compared with the 1985 Survey, greater effort was made to more accurately break-down total property taxation into meaningful and significant components. Despite this, the vetting process revealed continuing problems with the proper accounting of 'other requisitions'. This category was intended to cover the Provincial Planning Fund, general and

auxiliary hospitals, nursing homes and seniors foundations requisitions.

Any remaining variability in tax levels can be interpreted as being a function of differences in:

i) the range of tax-supported services provided by a municipality;
ii) the level at which these services are provided;
iii) the method of service-delivery, e.g. volunteers/community associations, or full-time municipal staff; private contractors or municipal staff; and
iv) the financing approach, e.g. general benefit versus property-owner benefit, and the associated tax burden; or pay-as-you-go capital works financing versus debenturing.

The general fiscal policies of a municipality may also have a significant bearing on the level of taxation e.g. the level and utilization of capital or operating reserves. Similarly, the age of a municipality's infrastructure can be a major factor.

No attempt has been made in this survey to gauge such service-profile/financing strategy detail. However, its importance should be borne in mind when making comparisons between municipalities.

5. Utilities Data

In the case of the main utilities - defined here as water, sewer and garbage services - the survey requested annual total charges, to smooth out the influence of seasonal variations. In the case of summer villages this information was solicited for the permanently-occupied sample property, and in the case of the rural municipalities the reference was to the hamlet property. Some basic service level indicators were also surveyed, in the form of: approximate average annual water consumption; main means of sewage treatment; and frequency of garbage collection.

A new standardized measure dealing with water and sewer costs, has been included for the first time to enable comparison on a unit cost basis for all reported properties. This charge or cost information is reported in Part III of the Survey. Utility charge methods and rate schedules are reported in Part IV of the survey. These tables should be consulted when attempting to explain or understand differences in service charge levels.

6. Market Value

The main comparative statistics featured in the summary statistics are based on the incidence of taxation or total local government costs as a percentage of the estimated market value, as reported.

It should be noted that a number of municipalities, specially some villages, did not report this information because of limited market activity in such properties in their area. Several municipalities also indicated a reticence to provide, or difficulty in establishing, reliable market values, under prevailing recessionary conditions. In many cases therefore the figures reported should be treated as more of a 'guess-timate' than a firm estimate.

7. Surveyed, but Unreported Information

The 1986 Survey was used to collect additional detail on: basic utility rate structures (e.g. flat rate; escalating rate; decreasing rate), and the degree of participation in regional utilities service delivery systems (water, sewer, or garbage disposal/sanitary landfills). Due to time constraints, these data have not been reported here, although they will be the subject of a forthcoming report. As part of the latter report those municipalities - about 35 percent - which have forwarded copies of the pertinent bylaws/schedules will be indicated. These are being maintained in an information file for access by interested municipalities.

8. Summary Statistics (Part I)

The main taxation and service charge detail is summarized in Part I. In order to facilitate greater ease of comparability, ranking and grouping by population size has been featured, as well as more group averaging. All the ranking is by decreasing population size, each group is accorded a separate page, and the pertinent group average is indicated at the bottom of that page. This is in addition to the overall averaging by type of municipality. The grouping is expected to be specially convenient for municipalities located around the middle of each group, while those at the extremes may wish to consult the appropriate municipalities in adjoining groups.

Another innovation with the present Survey is the inclusion of some context data drawn from sources other than the survey. The context data ensure that at least some information is available for non-respondent cases, as well as assisting in better explaining or understanding some of the more extreme differences between particular municipalities. The statistics presented provide indications of assessment mix, fiscal capacity, and unit taxation levels, as noted below:

Assessment Mix: The percentage of total equalized assessment (1986) separated out for the purposes of the School Foundation Program Fund levy yields a rough indicator of the basic assessment mix. It represents all non-farmland/ non-residential assessment, and generally reflects the extent of industrial/commercial development in the municipality. High percentages signify

comparatively broad assessment bases, spreading the burden that would otherwise have to be shouldered by mainly residential or farm-based taxpayers.

Fiscal Capacity: These statistics furnish the best readily available indicator of the relative ability of a municipality to provide a standard 'basket' of municipal goods and services, for any given 'standard' level of taxation. The fiscal capacity statistic featured here is 1986 equalized assessment per 1986 dwelling unit. This has some attributes as a measure that can be used to compare different types of municipality. Residential property - in the form of 'dwellings' - is the most significant type of property - in numbers and extent - which has to be serviced by a municipality.

The statistic cannot be applied usefully in the context of summer villages because dwellings are permanently occupied residential units, and do not include structures occupied by transient or seasonally-fluctuating populations. In summer villages the dwelling count is limited to those residences occupied year-round: residences occupied only periodically or seasonally, for less than six months in a year, are not included. For this reason the equivalent statistic for summer villages references the number of 'parcels with residences' reported in Schedule FR24 of the Alberta Municipal Affairs Financial Statement for municipalities. The parcels data used pertain to the situation reported for 1985.

It should be noted that a particularly relevant fiscal capacity statistic for rural municipalities relates equalized assessment to the road kilometerage services. For space reasons this could not be included in this table but these statistics are presented in another report Equalized Assessment Statistics 1986, which is available upon request from the Municipal Services Branch.

Unit Taxation: The Alberta Municipal Finance Information System (A.M.F.I.S.) now makes it possible to generate rough measures of taxation raised by a particular category of property. The context data features 1985 residential taxes (including mobile home license fees) per 1986 dwelling unit (1985 parcels in the case of summer villages). Note that this statistic represents an average for all residential properties, regardless of classification, in a particular municipality.

The unit taxation context data is not directly comparable with the sample property taxation reported on two main counts: a) the taxation data is for 1985, rather than 1986; and b) the context data is an average for all residences in a

municipality, and not simply the sample property.

Two equivalent unit taxation statistics are offered in the context data for rural municipalities. One references the residential (including mobile home) taxes raised from non-farm dwellings; the other references farmland taxes raised from farm units. The estimate of non-farm dwellings was derived by subtracting the number of farm units, as reported in the 1981 Federal Census of Agriculture, from the total number of dwellings currently reported for each rural municipality. The taxation data used are those reported for 1985.

These rural context statistics have certain deficiencies which should be borne in mind when using them: a) the base data is mostly dated, reflecting the 1981 rather than the 1986 situation, except in those few cases where a rural municipality has taken its own census since 1981; b) the quality of the statistic is also strongly dependent upon the quality of the financial reporting/accounting of the break-down of total property taxation into 'residential,' 'commercial,' 'industrial' and 'farmland' in Schedule FS5 of the Financial Statement for municipalities; c) there is an assumption that there is only one dwelling on each farm unit, which is not always the case; and d) if grants-in-lieu of taxation are particularly significant (in terms of residential or farm properties) for a municipality, this could distort the statistic by underestimating the related 'total taxes.' Notwithstanding the above, the statistics are offered if only with a view to initiating a collective effort to develop better statistics with fewer deficiencies.

Before leaving these context data it should be stressed that the number of dwelling units referenced for both urban and rural municipalities will reflect the results of post-1981 municipal censuses where these have been conducted. Not all municipalities conduct regular censuses, and even some that do may not report the current situation. Adjustment for such discrepancies, as well as a general up-dating of all cases, will occur once the results of the 1986 Federal Census are available. The dwelling count data used here are therefore liable to an unusually large degree of change, once the 1986 Federal Census results are published, specially where no municipal censuses have been taken since 1981, the year of the last Federal Census.

The main summary statistics deal with the sample property data collected during the Survey. To give a better picture of taxation, the tables feature Total Property Taxation, Supplementary School Taxation as a percentage of Total Property Taxation, and Total Property Taxation as a percentage of Market Value. A column is included indicating Total Property Taxation as a percentage of the average for all

municipalities in the pertinent status group (i.e. cities; towns; villages; summer villages; and all rural municipalities). There are four sub-groupings each for towns and villages, because of the large number of cases in these status groups. An average is presented for each sub-group, as well as the all-towns or all-villages average, at the bottom of each page.

The main summary statistics also deal with Total Aggregate Costs, being the sum of all property taxes plus all water, sewer and garbage utility charges experienced by the sample property. The percentage attributable to utilities is indicated, as is the standard water volume cost. This is the annual residential water cost based on a standard annual consumption of 360 cubic metres of water (79,200 gallons) at the rate of 30 cubic metres per month (6,600 gallons per month). The table also indicates Total Aggregate Costs as a percentage of the recognized 'status group' averages. Separate averages are referenced for the following status groups: Cities; Towns; Villages; Summer Villages; and Rural Municipalities.

9. Assessment and Taxation (Part II)

These tables detail aspects of the particular property (year of construction; residence size; lot size); as well as land assessment, buildings and improvements, assessment, and an indication of the year when the last general assessment came into effect for taxation purposes. This table also details the various components of total property taxation (supplementary school taxes; other requisitions; special municipal levies; and general municipal taxation).

10. Utility Charges (Part III)

Details are presented of the annual costs associated with each utility, including the standardized/annualized volume water and sewer costs. Some service details are presented including the type of sewage treatment involved, and the frequency of residential garbage collection.

11. Utility Rate Schedules (Part IV)

These tables present details on utility charge methods for water, sewer and garbage services, including specific notes (mainly on water rates). Annual water consumption, as reported, is also presented.

12. Technical Notes and List of Abbreviations

These notes are provided as a further aid to clarify some of the data discrepancies in the tables and to assist in interpretation. Listed below are points which apply generally to several tables and statistical data. In addition, more specific points are included at the beginning of each of the four parts of this report.

Averaging: With the reports listed in order of population size (highest to lowest), each page has about 30 municipalities which are considered a group. In the summary tables (Part 1) an average is recorded for each group on each page. A status average is also presented in Part 1 which means the average of all similar municipal types (for example, all towns).

Blank spaces in the tables: Throughout the report the following phrases are roughly synonymous; not submitted by the municipality, not applicable, not available, N/A. In some instances blanks are used as well as "0". In addition, depending on the circumstances, the data may or may not have been reported or the question was felt to be inappropriate for that municipality. Regardless of the method used to describe this situation, no data were entered. In part, where this occurs, it means further refinement may be needed in the survey instrument.

Dollar amounts: All dollar amounts refer to 1986 nominal or current dollars as reported by the municipality.

Rural utility data: Given the limited number of rural municipalities with utility systems, related data on utility charges and the associated rates were not recorded in this report.

Standard measure and conversions: Metric is the standard unit of measure found in this report. The following are conversion factors into the Imperial measure for area and volume.

one hectare (ha) approximately = 2.47 acres

one acre (ac) approximately = 0.4 hectares

one square metre (sq. m) approximately = 10.764 square feet

one square foot approximately = 0.093 square metres

one cubic metre (cu. m) approximately = 220 gallons

1000 gallons approximately = 4.55 cubic metres

Abbreviations and short forms: The following abbreviations appear throughout the document largely on the tables in parts 1 to 4 and are noted for clarification below.

Bl.-MO. - bi-monthly or every two months.
Bl./Year - twice a year.
Bldg./Improv. Assessment - Building and Improvements Assessment.
CAP. REGION - Capital Region Sewage Commission which is found around the Edmonton area.

Constr. - the year the sample property was constructed. As described earlier in this user's guide the property was to be five-to-ten years old.

CU. M. or cu. m. - usually referring to a volume of water where 4.55 cubic metres equals 1000 gallons.

Eq. Assess. - Equalized Assessment as reported by Alberta Municipal Affairs.

F.R. - Flat rate which means there is one fee regardless of the amount of the service used, e.g. water.

Gen. Assessment - general assessment.

General Mun. Taxes - General Municipal Taxes on properties in a municipality. These taxes are used to financially support the services provided by the municipality.

Lot size - lot sizes have been recorded either in area (square metres or hectares) or the dimensions of the lot (in metres). The latter is particularly useful for assessing frontage for special levies.

m. or M. - metres.

Max. - maximum.

Min. - minimum.

MO. - monthly.

N/A - not applicable. The information in this area has been determined to be N/A by the municipality or the question was left blank.

Other requisition - other requisitions which are levied by taxing authorities operating within the municipal area and include Provincial Planning Fund, general and auxiliary hospitals, nursing homes and seniors foundations requisitions.

Prop. - sample property as described in the user's guide.

RBC - Rotating Biological Control found in sewage lagoons.

Resid. Pr. Tax. Per Dw. - Residential Property Tax Per Dwelling where the tax is equal to total property tax and dwelling is meant to be permanent dwelling.

Rotating Biol. Contr. - Rotating Biological Control found in sewage lagoons.

Secon. - refers to secondary sewage treatment.

Secondary - Extend. - Secondary Extended sewage treatment.

Second. w/Phosph. Removal - Secondary sewage treatment with phosphorus removal.

TAC - Total Aggregate Cost. This cost refers to total property taxes and total utility charges.

T.P.T. - Total Property Tax which equals municipal taxes plus requisitions.

Util. Charges - the utility costs charged for municipal services supplied including water, sewer and garbage or some combination of the three.

Utility Charges - utility charges are for water, sewage and garbage disposal for the period indicated, e.g. annually, monthly or bi-monthly.

SFPF - School Foundation Program Fund which is a requisition collected by the municipality for education purposes from non-residential properties.

Spec. Levies - Special Levies for local improvements.

sq. m. - square metres.

STATUS AVG. - on the summary tables in Part I the status group refers to the type of municipality being examined, e.g. cities, towns, villages and so on.

Supplem. School Tax - taxes collected for supplementary school requisitions.

Any and all technical suggestions, comments or other queries relating to the survey should be directed to:

MUNICIPAL AFFAIRS

1986 RESIDENTIAL PROPERTY DATA SURVEY

URBAN MUNICIPALITY RECORD SHEET

NAME OF MUNICIPALITY: _____ (Please complete)

PART A. SAMPLE RESIDENTIAL PROPERTY: Five to ten year-old standard project (3C) bungalow; approximately 110 sq. metres (1200 sq. feet); with a single garage (attached or detached); on a standard residential lot in your municipality.

1. ASSESSMENT (1986 Tax Year)

1.1 Year Last General Assessment became effective for taxation purposes: 19___

1.2 Land Assessment Value $ _____ 1.5 Year of Construction: 19 ___

1.3 Bldg./Imp. Assessment Value $ _____ 1.6 Size of Residence: _____

1.4 Total Property Assessment Value $ _____ 1.7 Size of lot: _____

2. TAXATION (1986 Tax Year) for the Sample Residential Property given above.

	Mills	Taxes
2.1 Supplementary School Taxes	_____	$ _____
2.2 Other Requisitions*	_____	$ _____
2.3 Special Assessments and Local Improvements**	n/a	$ _____
2.4 Municipal Taxes***	_____	$ _____
2.5 Total Property Taxation	_____	$ _____

* To cover Provincial Planning Fund, general and auxiliary hospitals, nursing homes and seniors foundations requisitions.

** To cover frontage taxes, special frontage assessments and special local benefit assessments where such charges apply to a majority of the properties in the municipality in the same age-range as the sample property.

*** To cover the general municipal tax levy, including any generally applied but specifically identified rates such as for recreation, fire, debt service, etc.

3. UTILITY CHARGES (1986 Calendar Year)

Indicate the annual (i.e. 12 months accumulation) charges to the Sample Residential Property.

3.1 Water* ..... $ _____

3.2 Sewer* ..... $ _____

3.3 Garbage Collection* ..... $ _____

3.4 Total Charges ..... $ _____
(for above services only)

* Do not include any charges included in property taxation.

3.5 Approx. annual water consumption of residence _____ cu.m. (Conversion: 1 cu.m = 35.3 cu. ft. or 220 gals. or 1000 litres.)

3.6 Main means of sewage treatment (check):
_____ (lagoons) (tertiary) (other - specify)

3.7 Frequency of residential garbage collection (check): once a week ___ twice a week ___ once every two weeks ___ other (specify) ___

4. MARKET VALUE OF PROPERTY

4.1 Estimated market value of the Sample Residential Property in 1986.* $ _____

* Please provide an estimate of the market value of the sample property using your own or another person's informed knowledge of real estate values in your municipality/area.

1 The standard project home meets and occasionally exceeds minimum building requirements. The exterior usually has a typical style that is generally rectangular in shape. The floor plan is functional, finishes are normally limited to average quality pre-manufactured or standard materials and a minimum number of decorative features may be encountered. The total finished floor area for this class generally ranges from 90 to 190 m².

CONTINUED

PART B. UTILITY RATE STRUCTURES/SCHEDULES

5. RATE STRUCTURES

Please provide your residential rate structures for the following services (check):

Rate Structure (Please indicate no charge by N/C)	Service: Water	Sewer	Garbage
Flat Rate (one cost regardless of volume)	___	___	___
Escalating Rate (the cost per unit (e.g. $ per cu. m) steps up with increased volume)	___	___	___
Decreasing Rate (the cost per unit steps down with increased volume)	___	___	___

6. RATE SCHEDULES

Briefly describe the residential pricing schedules in effect for all or most of 1986, and how often you bill per year. Please attach a copy of the pertinent by-law(s)/schedule(s). A by-law/schedule information file will be maintained for access by interested municipalities.

	Billings/year
6.1 Water Service _____	
_____	___
6.2 Sewer Service _____	
_____	___
6.3 Garbage Service _____	
_____	___

6.4 Please provide an annual residential water and sewer service cost on the basis of a standard annual consumption of 369 cu. metres of water (79,200 gallons) at the rate of 30 cu. metres per month (6,600 gallons per month).

Water $_____ Sewer $_____ Total $_____

6.5 Does your municipality vary its water service rates seasonally? (check): Yes ___, or No ___. If Yes, describe briefly: _____

6.6 Does your municipality participate in a regional service delivery system for (check):

Water: Yes ___, or No ___; Sewer: Yes ___, or No ___.

Garbage Disposal: Yes ___, or No ___

PART C. IN YOUR OPINION: With reference to the 1985 Residential Property Data Survey.

7.1 Was last year's survey report shared with (check):

Council: Yes ___, or No ___; Local Media: Yes ___, or No ___.

7.2 How would you rate the value/usefulness of the report? (check):

High ___; Moderate ___; Low ___; Nil ___.

7.3 In which ways was the report useful:

To Administration: _____

To Council: _____

7.4 How could the scope/content/wording/timing of the survey and report be improved to enhance its usefulness? _____

7.5 How often should the survey be repeated? (check)

Every year ___; Every few years ___; Not at all ___.

PLEASE RETURN SURVEY AND COPIES OF BYLAWS/SCHEDULES BY JANUARY 16TH, 1987
AND ADDRESS ANY INQUIRIES TO

Municipal Services Branch, Alberta Municipal Affairs, 11th Floor, Jarvis Building
9925 - 107 Street, EDMONTON, Alberta T5K 2H9 Telephone: 427-2794

THANK YOU FOR YOUR PARTICIPATION!

9925 - 107 Street, EDMONTON, Alberta T5K 2H9 Telephone: 427-7794

THANK YOU FOR YOUR PARTICIPATION!

PART I
SUMMARY STATISTICS

Notes to Part I: Summary Statistics.

These statistics are presented under three major headings: Context Data, Taxation for the Sample Property and Total Aggregate Local Government Cost. Section 8 of the user's guide provides details on the specific meaning of this data.

Notes pertaining to the context data include:

- The status group (e.g. all towns) averages are reported at the bottom of the pages, while the group or page averages are not included.

- The context data applies to the entire municipality. It therefore does not apply to different types of properties found in Summer Villages (e.g. permanent and seasonal) or rural municipalities (e.g. acreages and hamlets).

The following points explain the data on taxation costs for the sample property:

- The taxation costs represent totals of municipal and requisition taxes.

- Total property tax expressed as a percentage of the group average enables similar sized municipalities listed on that page to compare themselves.

- Supplementary school tax as a percentage of total property tax accounts for the level of school taxes paid by the sample property.

- Total property tax as a percentage of market value is a relative measure indicating the level of burden on the selling price or market value of the residence.

The total aggregate government costs include:

- A total which reflects the annual "operating costs" levied on the property by a municipality (e.g. property taxes plus utility costs). In addition total aggregate costs expressed as a percentage of the group average provides a comparison measure.

- Relative level of utility costs are compared to the total costs.

- The costs for a standard (360 cubic meters) volume of water can be compared to all municipalities.

- For further information on any of the short forms included in the tables, refer to Section 12 of the user's guide.

SUMMARY TABLES

PART II
PROPERTY ASSESSMENT AND TAXATION

Notes to Part II: Assessment and Taxation.

As a supplementary note to the user's guide, the following points indicate the level of detail of the data used in the tables pertaining to the sample property, assessment, taxation and estimated market value.

- The sample property selected by the municipalities is described in terms of the year of construction (even though a five to ten year bungalow was requested, i.e. 1976 to 1981), size of the residence (approximately 110 sq. m or 1200 square feet, not including the garage) and the lot size either in area or the parcel dimensions. Although many acreage parcels conformed to the requested 1.23 hectares (3 acres) parcel size there were some exceptions including: the County of Smoky Lake (.04 hectares), County of Paintearth (1.8 hectares), the Municipal District of Peace (1.4 hectares), M.D. of Clearwater (1.8 hectares), M.D. of Kneehill (3.4 hectares), Spirit River (8.1 hectares), I.D. and I.D. 14 (0.9 hectares).

- Assessment information related to the sample property includes the year of last general assessment, and the assessed value (non-equalized) of land, building and improvements.

- Total taxation data for the sample property is categorized into municipal taxes (e.g. general municipal taxes and special levies for local improvements which are usually levied on a frontage basis) and requisition taxation (e.g. for supplementary school and other requisitions).

- The estimated market value or selling price of the sample property is also reported.

- No data is included for the Summer Villages of Jarvis Bay and Waiparous because of their recent incorporation on January 1st, 1986.

- The hamlets reported in the tables were selected by the rural municipalities.

- For further information on any of the short forms included in the tables, refer to Section 12 of the user's guide.

PART III
UTILITY CHARGES

Notes to Part III: Utility Charges

The subsequent points help clarify the content of the surveyed results reported in the following tables.

- The utility charges related to the sample property refer to the 1986 annual costs based on, then current, pricing structure reported in the survey.

- Only the rural municipalities with utility charges were reported in the tables. The Summer Villages were excluded completely, while cities, towns and villages were all included.

- The standard volume of water was estimated at 360 cubic metres per year. This was based on the sample property which was inhabited by a family of four. By assuming a standard volume of water, both water and sewer costs can be compared with all municipalities.

- When specified in the municipal by-law, the water charge was based on a 5/8 of an inch diameter connection (i.e. standard residential).

- None of the utility charges included a service or hook-up fee.

- For further information on any of the short forms included in the tables, refer to Section 12 of the user's guide.

PART IV
UTILITY RATES

Notes to Part IV: Utility Rates.

- It is cautioned that the reporting of utility rates schedules, may not always be accurate. In several instances the reported schedule in the survey differed from the municipal by-law. Where the discrepancies existed, the by-laws were used in developing these tables.

- In reviewing the tables in Part IV, usually the more complicated schedule existed for water services while garbage rates were usually straight-forward.

- The basic water rate and to a lesser degree sewage rates, include some combination of the costs of a minimum volume of water over a specific time period. Additional charges above the base rate or those related to seasonal rates are reported in additional notes and are referred to as overages.

- Also the annual water consumption (in cubic metres) for the sample property was tabulated.

- For further information on any of the short forms included in the tables, refer to Section 12 of the user's guide.
